

# *Workshop 2: Relations*

## *Sample Solutions*

SCC120 Fundamentals of  
Computer Science  
Solutions by Corina Sas

## *Exercise 1*

Draw diagraphs of the 4 relations, using this as your starting point:

# Answer 1: R1

$$R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$$

# *Answer 1: R2*

● 1

$$R2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$$

## Answer 1: $R3$

$$R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$$

## Answer 1: R4

$$R4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \\ \langle 3, 2 \rangle, \langle 4, 1 \rangle, \\ \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$$

## Exercise 2

Consider the following relations on  $\{ 1, 2, 3, 4 \}$ :

- $R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$

Which of these relations are reflexive?

## *Answer 2: R3 reflexive*

R3 since it contains all pairs of the form  $\langle a, a \rangle$ , namely:  $\langle 1, 1 \rangle$ ,  $\langle 2, 2 \rangle$ ,  $\langle 3, 3 \rangle$ ,  $\langle 4, 4 \rangle$ .

- $R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$

## Answer 2: $R1, R2, R4$

Relations  $R1$ ,  $R2$  and  $R4$  are not reflexive. Hint: find a pair  $\langle a, a \rangle$  which is not in these relations.

- $R1$  does not contain  $\langle 3, 3 \rangle$
- $R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R2$  does not contain  $\langle 1, 1 \rangle$  or  $\langle 4, 4 \rangle$
- $R2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R4$  does not contain  $\langle 1, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle$  or  $\langle 4, 4 \rangle$
- $R4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$

## Exercise 3

Consider the following relations on  $\{1, 2, 3, 4\}$ :

- $R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$

Which of these relations are symmetric?

## *Answer 3: R3 symmetric*

- R3, because in each case  $\langle b, a \rangle$  belongs to the relation whenever  $\langle a, b \rangle$  does.
- $R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$

## Answer 3: R3 symmetric

- $R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$

	$\langle a, b \rangle$	$\langle b, a \rangle$	
a	$\langle 1, 1 \rangle$	$\langle 1, 1 \rangle$	(a)
b	$\langle 1, 2 \rangle$	$\langle 2, 1 \rangle$	(d)
c	$\langle 1, 4 \rangle$	$\langle 4, 1 \rangle$	(g)
d	$\langle 2, 1 \rangle$	$\langle 1, 2 \rangle$	(b)
e	$\langle 2, 2 \rangle$	$\langle 2, 2 \rangle$	(e)
f	$\langle 3, 3 \rangle$	$\langle 3, 3 \rangle$	(f)
g	$\langle 4, 1 \rangle$	$\langle 1, 4 \rangle$	(c)
h	$\langle 4, 4 \rangle$	$\langle 4, 4 \rangle$	(h)

## Answer 3: $R1, R2, R4$

- The rest of relations are not symmetric: find a pair  $\langle a, b \rangle$  so that it is in the relation but  $\langle b, a \rangle$  is not.
- $R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$

## Exercise 4

Consider the following relations on  $\{1, 2, 3, 4\}$ :

- $R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R3 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 4 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$
- $R4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$
- Which of these relations are transitive?

## *Answer 4: R2 transitive*

- R2 since if  $\langle a, b \rangle$  and  $\langle b, c \rangle$  is in relation, then  $\langle a, c \rangle$  is.
- R2 :  $\langle 2, 3 \rangle$  and  $\langle 3, 2 \rangle$  then  $\langle 2, 2 \rangle$
- R2 =  $\{\langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle\}$

## Answer 4: $R_2$ transitive

$$R_2 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$$

Match?

a	$\langle 2, 2 \rangle$	$\langle 2, 2 \rangle$	$\therefore$	$\langle 2, 2 \rangle$ (a)
	$\langle 2, 2 \rangle$	$\langle 2, 3 \rangle$	$\therefore$	$\langle 2, 3 \rangle$ (b)
	$\langle 2, 2 \rangle$	$\langle 2, 4 \rangle$	$\therefore$	$\langle 2, 4 \rangle$ (c)
b	$\langle 2, 3 \rangle$	$\langle 3, 2 \rangle$	$\therefore$	$\langle 2, 2 \rangle$ (a)
	$\langle 2, 3 \rangle$	$\langle 3, 3 \rangle$	$\therefore$	$\langle 2, 3 \rangle$ (b)
	$\langle 2, 3 \rangle$	$\langle 3, 4 \rangle$	$\therefore$	$\langle 2, 4 \rangle$ (c)
c	$\langle 2, 4 \rangle$	no		
d	$\langle 3, 2 \rangle$	$\langle 2, 2 \rangle$	$\therefore$	$\langle 3, 2 \rangle$ (d)
	$\langle 3, 2 \rangle$	$\langle 2, 3 \rangle$	$\therefore$	$\langle 3, 3 \rangle$ (e)
	$\langle 3, 2 \rangle$	$\langle 2, 4 \rangle$	$\therefore$	$\langle 3, 4 \rangle$ (f)
e	$\langle 3, 3 \rangle$	$\langle 3, 3 \rangle$	$\therefore$	$\langle 3, 3 \rangle$ (e)
	$\langle 3, 3 \rangle$	$\langle 3, 4 \rangle$	$\therefore$	$\langle 3, 4 \rangle$ (f)
f	$\langle 3, 4 \rangle$	no		

## *Answer 4: R4 transitive*

- R4 since if  $\langle a, b \rangle$  and  $\langle b, c \rangle$  is in relation, then  $\langle a, c \rangle$  is.
- R4 :  $\langle 4, 2 \rangle$  and  $\langle 2, 1 \rangle$  then  $\langle 4, 1 \rangle$
- R4 = {  $\langle 2, 1 \rangle$ ,  $\langle 3, 1 \rangle$ ,  $\langle 3, 2 \rangle$ ,  $\langle 4, 1 \rangle$ ,  
 $\langle 4, 2 \rangle$ ,  $\langle 4, 3 \rangle$  }

## Answer 4: $R_4$ transitive

$$R_4 = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle \}$$

Match?

a	$\langle 2, 1 \rangle$	no		
b	$\langle 3, 1 \rangle$	no		
c	$\langle 3, 2 \rangle$	$\langle 2, 1 \rangle$	$\therefore$	$\langle 3, 1 \rangle$ (b)
d	$\langle 4, 1 \rangle$	no		
e	$\langle 4, 2 \rangle$	$\langle 2, 1 \rangle$	$\therefore$	$\langle 4, 1 \rangle$ (d)
f	$\langle 4, 3 \rangle$	$\langle 3, 1 \rangle$	$\therefore$	$\langle 4, 1 \rangle$ (d)
	$\langle 4, 3 \rangle$	$\langle 3, 2 \rangle$	$\therefore$	$\langle 4, 2 \rangle$ (e)

## *Answer 4: R1, R3*

Why are the other relations R1 and R3 not transitive?

$$R1 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 4 \rangle, \langle 4, 1 \rangle, \langle 4, 4 \rangle \}$$

- R1:  $\langle 3, 4 \rangle$  and  $\langle 4, 1 \rangle$  belong to it, while  $\langle 3, 1 \rangle$  does not
- R3:  $\langle 4, 1 \rangle$  and  $\langle 1, 2 \rangle$  belong to it, while  $\langle 4, 2 \rangle$  does not

## Answer 4: $R1$ not transitive

a	$\langle 1,1 \rangle$	$\langle 1,2 \rangle$	$\therefore$	$\langle 1,2 \rangle$ (b)
b	$\langle 1,2 \rangle$	$\langle 2,1 \rangle$	$\therefore$	$\langle 1,1 \rangle$ (a)
c		$\langle 2,2 \rangle$	$\therefore$	$\langle 1,2 \rangle$ (b)
	$\langle 2,1 \rangle$	$\langle 1,1 \rangle$	$\therefore$	$\langle 2,1 \rangle$ (c)
d		$\langle 1,2 \rangle$	$\therefore$	$\langle 2,2 \rangle$ (d)
	$\langle 2,2 \rangle$	$\langle 2,1 \rangle$	$\therefore$	$\langle 2,1 \rangle$ (c)
e	$\langle 3,4 \rangle$	$\langle 4,1 \rangle$	$\therefore$	$\langle 3,1 \rangle$ NO!
f	$\langle 4,1 \rangle$	$\langle 1,1 \rangle$	$\therefore$	$\langle 4,1 \rangle$ (f)
		$\langle 1,2 \rangle$	$\therefore$	$\langle 4,2 \rangle$ NO!
g	$\langle 4,4 \rangle$	$\langle 4,1 \rangle$	$\therefore$	$\langle 4,1 \rangle$ (f)

## Exercise 5

- Identify the relation depicted by the following diagraphs:

a)

b)

## Answer 5(a)

a)

$$R = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 3 \rangle, \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 3, 3 \rangle \}$$

## Answer 5(b)

b)

$$R = \{ \langle 1, 2 \rangle, \langle 2, 2 \rangle, \langle 2, 4 \rangle, \langle 3, 1 \rangle, \langle 3, 5 \rangle, \langle 4, 5 \rangle, \langle 5, 2 \rangle \}$$

## Exercise 6

Let R1 and R2 be two binary relations

- $R1 = \{ \langle \text{Ann}, 22 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$
- $R2 = \{ \langle \text{John}, 19 \rangle, \langle \text{Mike}, 24 \rangle, \langle \text{James}, 21 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

What is the a) union, b) intersection and c) difference of the two relations?

## *Answer 6(a)*

$R1 = \{ \langle \text{Ann}, 22 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

$R2 = \{ \langle \text{John}, 19 \rangle, \langle \text{Mike}, 24 \rangle, \langle \text{James}, 21 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

$R1 \cup R2 = \{ \langle \text{Ann}, 22 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle, \langle \text{John}, 19 \rangle, \langle \text{Mike}, 24 \rangle, \langle \text{James}, 21 \rangle \}$

## *Answer 6(b)*

$R1 = \{ \langle \text{Ann}, 22 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

$R2 = \{ \langle \text{John}, 19 \rangle, \langle \text{Mike}, 24 \rangle, \langle \text{James}, 21 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

$R1 \cap R2 = \{ \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

## *Answer 6(c)*

$R1 = \{ \langle \text{Ann}, 22 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

$R2 = \{ \langle \text{John}, 19 \rangle, \langle \text{Mike}, 24 \rangle, \langle \text{James}, 21 \rangle, \langle \text{Mary}, 23 \rangle, \langle \text{Laura}, 20 \rangle \}$

$R1 - R2 = \{ \langle \text{Ann}, 22 \rangle \}$

## *Exercise 7*

For each of the following relations defined on the positive integers:

$>$ ,  $<$ ,  $=$ ,  $\geq$ ,  $\leq$

justify whether the relation is:

- reflexive
- symmetric
- transitive

## *Answer 7*

- Hint: build the 5 sets required where  $R \subseteq A \times A$  and  $A = \{1, 2, 3, 4, 5\}$ .
- E for equal, L for less than, G for greater than, LE for less than or equal, GE for greater than or equal.
- Then test each set for the 3 qualities.

## *Answer 7 ( $A \times A$ )*

- $A = \{ 1, 2, 3, 4, 5 \}$
- $A \times A =$

	1	2	3	4	5
1	$\langle 1, 1 \rangle$	$\langle 1, 2 \rangle$	$\langle 1, 3 \rangle$	$\langle 1, 4 \rangle$	$\langle 1, 5 \rangle$
2	$\langle 2, 1 \rangle$	$\langle 2, 2 \rangle$	$\langle 2, 3 \rangle$	$\langle 2, 4 \rangle$	$\langle 2, 5 \rangle$
3	$\langle 3, 1 \rangle$	$\langle 3, 2 \rangle$	$\langle 3, 3 \rangle$	$\langle 3, 4 \rangle$	$\langle 3, 5 \rangle$
4	$\langle 4, 1 \rangle$	$\langle 4, 2 \rangle$	$\langle 4, 3 \rangle$	$\langle 4, 4 \rangle$	$\langle 4, 5 \rangle$
5	$\langle 5, 1 \rangle$	$\langle 5, 2 \rangle$	$\langle 5, 3 \rangle$	$\langle 5, 4 \rangle$	$\langle 5, 5 \rangle$

## Answer 7 (=)

- $E = \{ \langle 1,1 \rangle , \langle 2,2 \rangle , \langle 3,3 \rangle , \langle 4,4 \rangle , \langle 5,5 \rangle \}$

E	1	2	3	4	5
1	<b><math>\langle 1, 1 \rangle</math></b>	$\langle 1, 2 \rangle$	$\langle 1, 3 \rangle$	$\langle 1, 4 \rangle$	$\langle 1, 5 \rangle$
2	$\langle 2, 1 \rangle$	<b><math>\langle 2, 2 \rangle</math></b>	$\langle 2, 3 \rangle$	$\langle 2, 4 \rangle$	$\langle 2, 5 \rangle$
3	$\langle 3, 1 \rangle$	$\langle 3, 2 \rangle$	<b><math>\langle 3, 3 \rangle</math></b>	$\langle 3, 4 \rangle$	$\langle 3, 5 \rangle$
4	$\langle 4, 1 \rangle$	$\langle 4, 2 \rangle$	$\langle 4, 3 \rangle$	<b><math>\langle 4, 4 \rangle</math></b>	$\langle 4, 5 \rangle$
5	$\langle 5, 1 \rangle$	$\langle 5, 2 \rangle$	$\langle 5, 3 \rangle$	$\langle 5, 4 \rangle$	<b><math>\langle 5, 5 \rangle</math></b>

## Answer 7 (<)

- $L = \{ \langle 1,2 \rangle, \langle 1,3 \rangle, \langle 1,4 \rangle, \langle 1,5 \rangle, \langle 2,3 \rangle, \langle 2,4 \rangle, \langle 2,5 \rangle, \langle 3,4 \rangle, \langle 3,5 \rangle, \langle 4,5 \rangle \}$

L	1	2	3	4	5
1	$\langle 1, 1 \rangle$	$\langle 1, 2 \rangle$	$\langle 1, 3 \rangle$	$\langle 1, 4 \rangle$	$\langle 1, 5 \rangle$
2	$\langle 2, 1 \rangle$	$\langle 2, 2 \rangle$	$\langle 2, 3 \rangle$	$\langle 2, 4 \rangle$	$\langle 2, 5 \rangle$
3	$\langle 3, 1 \rangle$	$\langle 3, 2 \rangle$	$\langle 3, 3 \rangle$	$\langle 3, 4 \rangle$	$\langle 3, 5 \rangle$
4	$\langle 4, 1 \rangle$	$\langle 4, 2 \rangle$	$\langle 4, 3 \rangle$	$\langle 4, 4 \rangle$	$\langle 4, 5 \rangle$
5	$\langle 5, 1 \rangle$	$\langle 5, 2 \rangle$	$\langle 5, 3 \rangle$	$\langle 5, 4 \rangle$	$\langle 5, 5 \rangle$

## Answer 7 (>)

- $G = \{ \langle 2, 1 \rangle, \langle 3, 1 \rangle, \langle 3, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 2 \rangle, \langle 4, 3 \rangle, \langle 5, 1 \rangle, \langle 5, 2 \rangle, \langle 5, 3 \rangle, \langle 5, 4 \rangle \}$

G	1	2	3	4	5
1	$\langle 1, 1 \rangle$	$\langle 1, 2 \rangle$	$\langle 1, 3 \rangle$	$\langle 1, 4 \rangle$	$\langle 1, 5 \rangle$
2	$\langle 2, 1 \rangle$	$\langle 2, 2 \rangle$	$\langle 2, 3 \rangle$	$\langle 2, 4 \rangle$	$\langle 2, 5 \rangle$
3	$\langle 3, 1 \rangle$	$\langle 3, 2 \rangle$	$\langle 3, 3 \rangle$	$\langle 3, 4 \rangle$	$\langle 3, 5 \rangle$
4	$\langle 4, 1 \rangle$	$\langle 4, 2 \rangle$	$\langle 4, 3 \rangle$	$\langle 4, 4 \rangle$	$\langle 4, 5 \rangle$
5	$\langle 5, 1 \rangle$	$\langle 5, 2 \rangle$	$\langle 5, 3 \rangle$	$\langle 5, 4 \rangle$	$\langle 5, 5 \rangle$

## Answer 7

- $LE = \{ \langle 1,1 \rangle, \langle 1,2 \rangle, \langle 1,3 \rangle, \langle 1,4 \rangle, \langle 1,5 \rangle, \langle 2,2 \rangle, \langle 2,3 \rangle, \langle 2,4 \rangle, \langle 2,5 \rangle, \langle 3,3 \rangle, \langle 3,4 \rangle, \langle 3,5 \rangle, \langle 4,4 \rangle, \langle 4,5 \rangle, \langle 5,5 \rangle \}$
- $GE = \{ \langle 1,1 \rangle, \langle 2,1 \rangle, \langle 2,2 \rangle, \langle 3,1 \rangle, \langle 3,2 \rangle, \langle 3,3 \rangle, \langle 4,1 \rangle, \langle 4,2 \rangle, \langle 4,3 \rangle, \langle 4,4 \rangle, \langle 5,1 \rangle, \langle 5,2 \rangle, \langle 5,3 \rangle, \langle 5,4 \rangle, \langle 5,5 \rangle \}$

## Answer 7: Reflexive

- $R \subseteq A \times A$  is **reflexive** if and only if
- $\langle a, a \rangle \in R$  for **every** element  $a$  of  $A$ 
    - every element of  $A$  is in relation with itself
  - So for  $A = \{ 1, 2, 3, 4, 5 \}$   $R$  \*must\* contain  $\langle 1, 1 \rangle$ ,  $\langle 2, 2 \rangle$ ,  $\langle 3, 3 \rangle$ ,  $\langle 4, 4 \rangle$  and  $\langle 5, 5 \rangle$ .

## Answer 7: Reflexive?

$E = \{ \langle 1,1 \rangle, \langle 2,2 \rangle, \langle 3,3 \rangle, \langle 4,4 \rangle, \langle 5,5 \rangle \}$  yes

$L = \{ \langle 1,2 \rangle, \langle 1,3 \rangle, \langle 1,4 \rangle, \langle 1,5 \rangle, \langle 2,3 \rangle, \langle 2,4 \rangle, \langle 2,5 \rangle, \langle 3,4 \rangle, \langle 3,5 \rangle, \langle 4,5 \rangle \}$  no

$G = \{ \langle 2,1 \rangle, \langle 3,1 \rangle, \langle 3,2 \rangle, \langle 4,1 \rangle, \langle 4,2 \rangle, \langle 4,3 \rangle, \langle 5,1 \rangle, \langle 5,2 \rangle, \langle 5,3 \rangle, \langle 5,4 \rangle \}$  no

$LE = \{ \langle 1,1 \rangle, \langle 1,2 \rangle, \langle 1,3 \rangle, \langle 1,4 \rangle, \langle 1,5 \rangle, \langle 2,2 \rangle, \langle 2,3 \rangle, \langle 2,4 \rangle, \langle 2,5 \rangle, \langle 3,3 \rangle, \langle 3,4 \rangle, \langle 3,5 \rangle, \langle 4,4 \rangle, \langle 4,5 \rangle, \langle 5,5 \rangle \}$  yes

$GE = \{ \langle 1,1 \rangle, \langle 2,1 \rangle, \langle 2,2 \rangle, \langle 3,1 \rangle, \langle 3,2 \rangle, \langle 3,3 \rangle, \langle 4,1 \rangle, \langle 4,2 \rangle, \langle 4,3 \rangle, \langle 4,4 \rangle, \langle 5,1 \rangle, \langle 5,2 \rangle, \langle 5,3 \rangle, \langle 5,4 \rangle, \langle 5,5 \rangle \}$  yes

## *Answer 7: Symmetric*

**$R \subseteq A \times A$  is symmetric** if and only if  
for any  **$a$** , and  **$b$**  in  **$A$** ,  
whenever  **$\langle a, b \rangle \in R$**  then  **$\langle b, a \rangle \in R$** .

## Answer 7: Symmetric?

$E = \{ \langle 1,1 \rangle, \langle 2,2 \rangle, \langle 3,3 \rangle, \langle 4,4 \rangle, \langle 5,5 \rangle \}$  yes

$L = \{ \langle 1,2 \rangle, \langle 1,3 \rangle, \langle 1,4 \rangle, \langle 1,5 \rangle, \langle 2,3 \rangle, \langle 2,4 \rangle, \langle 2,5 \rangle, \langle 3,4 \rangle, \langle 3,5 \rangle, \langle 4,5 \rangle \}$  i.e.  $\langle 5,4 \rangle$  absent no

$G = \{ \langle 2,1 \rangle, \langle 3,1 \rangle, \langle 3,2 \rangle, \langle 4,1 \rangle, \langle 4,2 \rangle, \langle 4,3 \rangle, \langle 5,1 \rangle, \langle 5,2 \rangle, \langle 5,3 \rangle, \langle 5,4 \rangle \}$  i.e.  $\langle 4,5 \rangle$  absent no

$LE = \{ \langle 1,1 \rangle, \langle 1,2 \rangle, \langle 1,3 \rangle, \langle 1,4 \rangle, \langle 1,5 \rangle, \langle 2,2 \rangle, \langle 2,3 \rangle, \langle 2,4 \rangle, \langle 2,5 \rangle, \langle 3,3 \rangle, \langle 3,4 \rangle, \langle 3,5 \rangle, \langle 4,4 \rangle, \langle 4,5 \rangle, \langle 5,5 \rangle \}$  i.e.  $\langle 5,4 \rangle$  absent no

$GE = \{ \langle 1,1 \rangle, \langle 2,1 \rangle, \langle 2,2 \rangle, \langle 3,1 \rangle, \langle 3,2 \rangle, \langle 3,3 \rangle, \langle 4,1 \rangle, \langle 4,2 \rangle, \langle 4,3 \rangle, \langle 4,4 \rangle, \langle 5,1 \rangle, \langle 5,2 \rangle, \langle 5,3 \rangle, \langle 5,4 \rangle, \langle 5,5 \rangle \}$  i.e.  $\langle 4,5 \rangle$  absent no

## Answer 7: Transitive

- $R \subseteq A \times A$  is transitive if and only if for any  $a, b$ , and  $c \in A$ , if  $\langle a, b \rangle \in R$ , and  $\langle b, c \rangle \in R$  then  $\langle a, c \rangle \in R$
- '=' is transitive, for if  $a = b$  and  $b = c$  then  $a = c$ . (1 = 1 and 1 = 1 then 1 = 1)
- '>' is transitive, for if  $a > b$  and  $b > c$  then  $a > c$ . (5 > 4 and 4 > 3 then 5 > 3)
- '<' is transitive, for if  $a < b$  and  $b < c$  then  $a < c$ . (3 < 4 and 4 < 5 then 3 < 5)
- '>=' and '<=' are also transitive.

## *Answer 7*

- All the sets are transitive.
- $E$  is the only symmetric set.
- $E$ ,  $LE$  and  $GE$  are reflexive.

## *Exercise 8(a)*

Consider the following relations on  $\{1, 2, 3, 4\}$ :

- $R1 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R2 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle \}$
- $R3 = \{ \langle 2, 4 \rangle, \langle 4, 2 \rangle \}$

Which of these relations are reflexive?

## *Answer 8(a): R2 reflexive*

R2 since it contains all pairs of the form  $\langle a, a \rangle$ , namely:  $\langle 1, 1 \rangle$ ,  $\langle 2, 2 \rangle$ ,  $\langle 3, 3 \rangle$ ,  $\langle 4, 4 \rangle$ .

- $R2 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle \}$

## *Answer 8(a): R1, R3*

Relations R1 and R3 are not reflexive. Hint: find a pair  $\langle a, a \rangle$  which is not in these relations.

- R1 does not contain  $\langle 1, 1 \rangle$  and  $\langle 4, 4 \rangle$
- $R1 = \{\langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle\}$
- R3 does not contain  $\langle 1, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle$  and  $\langle 4, 4 \rangle$
- $R3 = \{\langle 2, 4 \rangle, \langle 4, 2 \rangle\}$

## *Exercise 8(b)*

Consider the following relations on  $\{1, 2, 3, 4\}$ :

- $R1 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
- $R2 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle \}$
- $R3 = \{ \langle 2, 4 \rangle, \langle 4, 2 \rangle \}$

Which of these relations are symmetric?

## *Answer 8(b): R2 symmetric*

Relation R2 is symmetric because in each case  $\langle b, a \rangle$  belongs to the relation whenever  $\langle a, b \rangle$  does.

$R2 = \{\langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle\}$

Also for each pair of the form  $\langle a, a \rangle$  which is in R, it also means that  $\langle a, a \rangle$  is in R.

So R2 symmetric.

## *Answer 8(b): R3 symmetric*

- Relation R3 is symmetric because in each case  $\langle b, a \rangle$  belongs to the relation whenever  $\langle a, b \rangle$  does.
- $R3 = \{ \langle 2, 4 \rangle, \langle 4, 2 \rangle \}$

## *Answer 8(b): R1*

- R1 is not symmetric: find a pair  $\langle a, b \rangle$  so that it is in the relation but  $\langle b, a \rangle$  is not.
- $R1 = \{\langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle\}$
- For instance, the ordered pair  $\langle 2, 4 \rangle$  is in R1, but  $\langle 4, 2 \rangle$  is not.

## Exercise 8(c)

Consider the following relations on  $\{1, 2, 3, 4\}$ :

- $R1 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$
  - $R2 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle \}$
  - $R3 = \{ \langle 2, 4 \rangle, \langle 4, 2 \rangle \}$
- 
- Which of these relations are transitive?

## *Answer 8(c): R1 transitive*

- Relation R1 is transitive since if  $\langle a, b \rangle$  and  $\langle b, c \rangle$  is in relation, then  $\langle a, c \rangle$  is.
- $R1 = \{\langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle\}$

## Answer 8(c): R1 transitive

$R1 = \{ \langle 2, 2 \rangle, \langle 2, 3 \rangle, \langle 2, 4 \rangle, \langle 3, 2 \rangle, \langle 3, 3 \rangle, \langle 3, 4 \rangle \}$

Match?

a	$\langle 2, 2 \rangle$	$\langle 2, 2 \rangle$	$\therefore$	$\langle 2, 2 \rangle$ (a)
	$\langle 2, 2 \rangle$	$\langle 2, 3 \rangle$	$\therefore$	$\langle 2, 3 \rangle$ (b)
	$\langle 2, 2 \rangle$	$\langle 2, 4 \rangle$	$\therefore$	$\langle 2, 4 \rangle$ (c)
b	$\langle 2, 3 \rangle$	$\langle 3, 2 \rangle$	$\therefore$	$\langle 2, 2 \rangle$ (a)
	$\langle 2, 3 \rangle$	$\langle 3, 3 \rangle$	$\therefore$	$\langle 2, 3 \rangle$ (b)
	$\langle 2, 3 \rangle$	$\langle 3, 4 \rangle$	$\therefore$	$\langle 2, 4 \rangle$ (c)
c	$\langle 2, 4 \rangle$	no		
d	$\langle 3, 2 \rangle$	$\langle 2, 2 \rangle$	$\therefore$	$\langle 3, 2 \rangle$ (d)
	$\langle 3, 2 \rangle$	$\langle 2, 3 \rangle$	$\therefore$	$\langle 3, 3 \rangle$ (e)
	$\langle 3, 2 \rangle$	$\langle 2, 4 \rangle$	$\therefore$	$\langle 3, 4 \rangle$ (f)
e	$\langle 3, 3 \rangle$	$\langle 3, 3 \rangle$	$\therefore$	$\langle 3, 3 \rangle$ (e)
	$\langle 3, 3 \rangle$	$\langle 3, 4 \rangle$	$\therefore$	$\langle 3, 4 \rangle$ (f)
f	$\langle 3, 4 \rangle$	no		

## *Answer 8(c): R2 transitive*

- Relation R2 is transitive since if  $\langle a, b \rangle$  and  $\langle b, c \rangle$  is in relation, then  $\langle a, c \rangle$  is.
- $R2 = \{\langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle\}$

## Answer 8(c): $R2$ transitive

$$R2 = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle, \langle 3, 3 \rangle, \langle 4, 4 \rangle \}$$

Match?

a	$\langle 1, 1 \rangle$	$\langle 1, 1 \rangle$	$\therefore$	$\langle 1, 1 \rangle$ (a)
	$\langle 1, 1 \rangle$	$\langle 1, 2 \rangle$	$\therefore$	$\langle 1, 2 \rangle$ (b)
b	$\langle 1, 2 \rangle$	$\langle 2, 1 \rangle$	$\therefore$	$\langle 1, 1 \rangle$ (a)
	$\langle 1, 2 \rangle$	$\langle 2, 2 \rangle$	$\therefore$	$\langle 1, 2 \rangle$ (b)
c	$\langle 2, 1 \rangle$	$\langle 1, 1 \rangle$	$\therefore$	$\langle 2, 1 \rangle$ (c)
	$\langle 2, 1 \rangle$	$\langle 1, 2 \rangle$	$\therefore$	$\langle 2, 2 \rangle$ (d)
d	$\langle 2, 2 \rangle$	$\langle 2, 1 \rangle$	$\therefore$	$\langle 2, 1 \rangle$ (c)
	$\langle 2, 2 \rangle$	$\langle 2, 2 \rangle$	$\therefore$	$\langle 2, 2 \rangle$ (d)
e	$\langle 3, 3 \rangle$	$\langle 3, 3 \rangle$	$\therefore$	$\langle 3, 3 \rangle$ (e)
f	$\langle 4, 4 \rangle$	$\langle 4, 4 \rangle$	$\therefore$	$\langle 4, 4 \rangle$ (f)

## *Answer 8(c): R3*

Why is relation R3 not transitive?

- $R3 = \{ \langle 2, 4 \rangle, \langle 4, 2 \rangle \}$

$\langle 2, 4 \rangle$  and  $\langle 4, 2 \rangle$  belong to R3, but  $\langle 2, 2 \rangle$  does not belong to R3.

Another example:  $\langle 4, 2 \rangle$  and  $\langle 2, 4 \rangle$  belong to R3, but  $\langle 4, 4 \rangle$  does not.

## *Exercise 9*

Let  $A = \{a, b, c, d\}$  and  $R$  is the relation  
 $R = \{ \langle a, a \rangle \}$ .

Is this relation:

- a) reflexive
- b) symmetric
- c) irreflexive
- d) transitive?

## *Answer 9(a)*

- $A = \{a, b, c, d\}$
- Relation  $R = \{ \langle a, a \rangle \}$  is not reflexive as  $\langle b, b \rangle$ ,  $\langle c, c \rangle$  and  $\langle d, d \rangle$  do not belong to  $R$ .

## *Answer 9(b)*

- $A = \{a, b, c, d\}$
- Relation  $R = \{ \langle a, a \rangle \}$  is symmetric as for  $\langle a, a \rangle$  in  $R$ ,  $\langle a, a \rangle$  also belongs to  $R$ .

## *Answer 9(c)*

- $A = \{a, b, c, d\}$
- Relation  $R = \{ \langle a, a \rangle \}$  is not irreflexive as  $\langle a, a \rangle$  belongs to  $R$ .

## *Answer 9(d)*

- $A = \{a, b, c, d\}$
- Relation  $R = \{ \langle a, a \rangle \}$  is transitive as for  $\langle a, a \rangle$  in  $R$ , and  $\langle a, a \rangle$  in  $R$ , then  $\langle a, a \rangle$  also belongs to  $R$ .

## Exercise 10

- Specify the sets  $A$  and  $R$ , where  $A$  is the set on which the relation  $R$  is represented in this diagram:

## Answer 10

- $A = \{0, 1, 2, 3, 4, 5\}$
- $R = \{ \langle 5, 4 \rangle, \langle 5, 3 \rangle, \langle 5, 2 \rangle, \langle 5, 1 \rangle, \langle 5, 0 \rangle, \langle 4, 3 \rangle, \langle 4, 2 \rangle, \langle 4, 1 \rangle, \langle 4, 0 \rangle, \langle 3, 2 \rangle, \langle 3, 1 \rangle, \langle 3, 0 \rangle, \langle 2, 1 \rangle, \langle 2, 0 \rangle, \langle 1, 0 \rangle \}$

## *Exercise 11*

Let  $A = \{a, b, c, d\}$  and

$R = \{ \langle a, a \rangle, \langle b, b \rangle, \langle c, c \rangle, \langle d, d \rangle \}$ .

Is relation  $R$

a) reflexive

b) symmetric

c) transitive?

If not, specify why.

## *Answer 11(a)*

Let  $A = \{a, b, c, d\}$  and

$R = \{ \langle a, a \rangle, \langle b, b \rangle, \langle c, c \rangle, \langle d, d \rangle \}$ .

Relation  $R$  is reflexive because for each element  $x$  in  $A$ ,  $\langle x, x \rangle$  is also in  $R$ :

$\langle a, a \rangle, \langle b, b \rangle, \langle c, c \rangle, \langle d, d \rangle$  are all in  $R$

## *Answer 11(b)*

Let  $A = \{a, b, c, d\}$  and

$R = \{ \langle a, a \rangle, \langle b, b \rangle, \langle c, c \rangle, \langle d, d \rangle \}$ .

Relation  $R$  is symmetric because for each  $\langle x, y \rangle$  in  $R$ ,  $\langle y, x \rangle$  is also in  $R$ :

$\langle a, a \rangle$  in  $R$ ,  $\langle a, a \rangle$  also in  $R$

$\langle b, b \rangle$  in  $R$ ,  $\langle b, b \rangle$  also in  $R$

$\langle c, c \rangle$  in  $R$ ,  $\langle c, c \rangle$  also in  $R$

$\langle d, d \rangle$  in  $R$ ,  $\langle d, d \rangle$  also in  $R$

## *Answer 11(c)*

Let  $A = \{a, b, c, d\}$  and

$R = \{ \langle a, a \rangle, \langle b, b \rangle, \langle c, c \rangle, \langle d, d \rangle \}$ .

Relation  $R$  is transitive because

- Relation  $R$  is transitive because if  $\langle a, a \rangle$  in  $R$ , and  $\langle a, a \rangle$  in  $R$ , then  $\langle a, a \rangle$  also belongs to  $R$ .
- The same argument applies to the other 3 ordered pairs.

## *Exercise 12*

Let  $R$  be the relation on the set of real numbers, described by  $x = 2y + 1$ .

Is relation  $R$ :

- a) reflexive
- b) symmetric
- c) transitive?

## *Answer 12(a)*

Let  $R$  be the relation on the set of real numbers, described by  $x = 2y + 1$ .

$$R = \{ \langle x, y \rangle \mid x = 2y + 1 \}$$

$R$  consist of order pairs like:  $\langle 2y + 1, y \rangle$

$R$  is not reflexive as for instance,  $\langle 1, 1 \rangle$  is not in  $R$

If  $x = 1$ ,  $y = (x - 1) / 2 = (1 - 1) / 2 = 0$ , so  $\langle 1, 0 \rangle$  is in  $R$

But  $\langle 1, 1 \rangle$  is not in  $R$ , as  $y = (1 - 1) / 2 = 0 \neq 1$

## *Answer 12(b)*

Let  $R$  be the relation on the set of real numbers, described by  $x = 2y + 1$ .

$$R = \{ \langle x, y \rangle \mid x = 2y + 1 \}$$

$$R = \{ \langle 2y + 1, y \rangle \}$$

$R$  is not symmetric as for instance,

$\langle 3, 1 \rangle$  is in  $R$ , but  $\langle 1, 3 \rangle$  is not in  $R$

If  $x = 3$ ,  $y = (x - 1) / 2 = (3 - 1) / 2 = 1$ , so  $\langle 3, 1 \rangle$  is in  $R$

If  $x = 1$ ,  $y = (x - 1) / 2 = (1 - 1) / 2 = 0$ , so  $\langle 1, 0 \rangle$  is in  $R$

So  $\langle 1, 3 \rangle$  is not in  $R$ , as  $y = (1 - 1) / 2 = 0 \neq 3$

## *Answer 12(c)*

Let  $R$  be the relation on the set of real numbers, described by  $x = 2y + 1$ .

$$R = \{ \langle x, y \rangle \mid x = 2y + 1 \}$$

$$R = \{ \langle 2y + 1, y \rangle \}$$

$R$  is not transitive as for instance,  $\langle 3, 1 \rangle$  and  $\langle 1, 0 \rangle$  are in  $R$ , but  $\langle 3, 0 \rangle$  is not in  $R$

If  $x = 3$ ,  $y = (x - 1) / 2 = (3 - 1) / 2 = 1$ , so  $\langle 3, 1 \rangle$  is in  $R$

If  $x = 1$ ,  $y = (x - 1) / 2 = (1 - 1) / 2 = 0$ , so  $\langle 1, 0 \rangle$  is in  $R$

But  $\langle 3, 0 \rangle$  is not in  $R$ , as for  $x = 3$ ,  $y = (3 - 1) / 2 = 1 \neq 0$

## Exercise 13

Which properties the relation in the following diagraph has?

## Answer 13

- $R$  is not reflexive as the digraph does not have a self-loop for each of its points
- $R$  is not symmetric; for instance, there is an arc from  $a$  to  $b$ , but not from  $b$  to  $a$
- $R$  is not transitive; there is an arc from  $a$  to  $b$ , and another one from  $b$  to  $d$ , but there is no arc from  $a$  to  $d$

## Exercise 14

Let  $R = \{ \langle a, b \rangle \mid a = b + 1 \}$  on the set of real numbers.

Which properties this relation has?

- a) reflexive
- b) symmetric
- c) transitive

## *Answer 14(a)*

Let  $R = \{ \langle a, b \rangle \mid a = b + 1 \}$  on the set of real numbers.

Relation  $R$  is not reflexive.

For example:  $\langle 3, 3 \rangle$  is not in  $R$ .

If  $\langle 3, 3 \rangle$  would be in  $R$ , it would imply that  $a = 3$ , and  $b = 3$ ; or  $3 = 3 + 1$ , or  $3 = 4$  which is not true, so  $\langle 3, 3 \rangle$  is not in  $R$

## *Answer 14(b)*

Let  $R = \{ \langle a, b \rangle \mid a = b + 1 \}$  on the set of real numbers.

Relation  $R$  is not symmetric.

For example:  $\langle 4, 3 \rangle$  is in  $R$ , but  $\langle 3, 4 \rangle$  is not

For  $b = 3$ ,  $a = 3 + 1 = 4$ , so  $\langle 4, 3 \rangle$  is in  $R$

For  $a = 3$ ,  $b = 2$ , and  $b \neq 4$ , so  $\langle 3, 2 \rangle$  is in  $R$ , but  $\langle 3, 4 \rangle$  is not in  $R$ .

## *Answer 14(c)*

Let  $R = \{ \langle a, b \rangle \mid a = b + 1 \}$  on the set of real numbers.

Relation  $R$  is not transitive.

For example:  $\langle 4, 3 \rangle$  and  $\langle 3, 2 \rangle$  are in  $R$ , but  $\langle 4, 2 \rangle$  is not.

For  $b = 3$ ,  $a = 3 + 1 = 4$ , so  $\langle 4, 3 \rangle$  is in  $R$

For  $b = 2$ ,  $a = 2 + 1 = 3$ , so  $\langle 3, 2 \rangle$  is in  $R$

Regarding  $\langle 4, 2 \rangle$ :

for  $a = 4$ , then  $b = 3$ , so  $b \neq 2$ . Thus,  $\langle 4, 2 \rangle$  is not in  $R$
